

2019

Intech (innovative tackle technology) is the brand that was created by professional anglers, it became an aspiration to use high-quality production. Because of the lack of qualitative production in the budgetary price range, our team decided to present the world their own brand to make it possible to everyone to catch fish with qualitative fishing tackles. The Intech company conducts effective cooperation with global manufacturers. Such relations together with long-term experience of anglers experts, helped to present at the European market the goods which take the leading positions in the ratio price/quality. All new goods of the brand are tested by professional anglers in the most severe conditions, and only after successfully passed tests, new goods are put on the market. Thanks to such control of quality, we can surely say that Intech - it is the choice of those who want to catch fish with qualitative tackles and at the same time not overpaying for a big name.

For many years company Fishingstock conducts active life on the world fishing tackle market. Everything began from small group of fishers-sportsmen who wanted to catch fish with tackles of good quality.

Thanks to the commitment and persistence, the company was created only during one year. Day from day, increasing pace, Fishingstock became Ukrainian representative of world fishing brands, such as Baitbreath, YGK, Yamaga Blanks, Vanfook, Sawamura, etc. While the sphere of influence of the company was extending, sportsmen-founders were winning new and new tops of fishing sport.

Thanks to the long-term experience and fishing skills, in 2016 the company Fishingstock began to conduct productive cooperation with producers of fishing goods and also released the new brand Intech on world fishing tackle market.

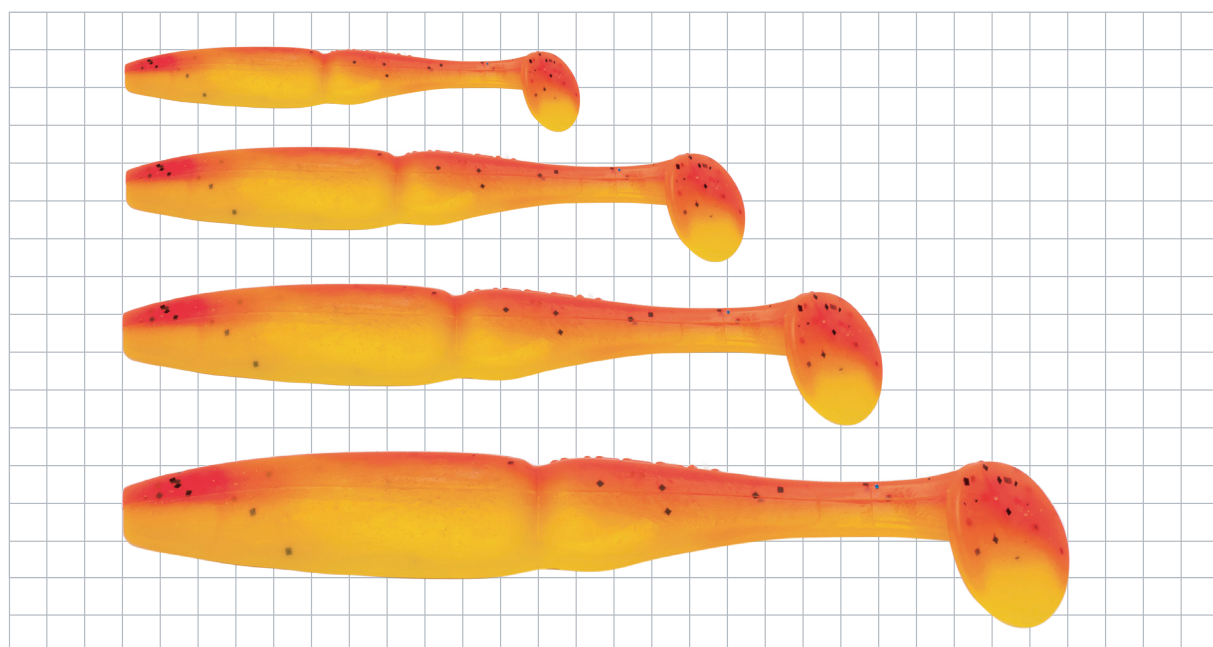

**Fishingstock**

## Slim Shad

**Intech Slim Shad** is a traditional designed soft bait, which represents one more step towards the perfect lure. This high performance soft bait model skillfully combines the best features of the previous created soft baits models. Soft bait Intech Slim Shad possess the following characteristics: optimal softness and elasticity, impregnation with the attractant, strength and durability of rubber, as well as an excellent jerky and lifelike motions at various speeds. The tail part of the bait and the body itself are separated by a thin partition, thanks to which the Slim Shad bait has an effective, soft, high-frequency motions, but at the same time not too aggressive ones. Such a numerous characteristics ensure the effectiveness of using of the Slim Shad. In a most cases, these specific features are very efficient for catching either zander, perch or pike. By the way, according to the results of various tests, this lure may also attract such species catfishes.

Intech Slim Shad has wide-body and massive profile, but it doesn't affect Slim Shad's aerodynamic attributes, which are still very good. That is why, this soft bait can be very efficient during the fishing on a far distance. Special groove on the Slim Shad's rear edge is perfect for mounting an offset hooks. The tail has a small size and it is attached to the bait over the large cross-section. On the one hand, that gives additional strength, and on the other hand it ensure small-amplitude high-frequency oscillations. Intech Slim Shad will attract all kinds of predators, even those «passive» predators which are not interested in hunting at the giving moment.

### Color Chart

## Long Heel

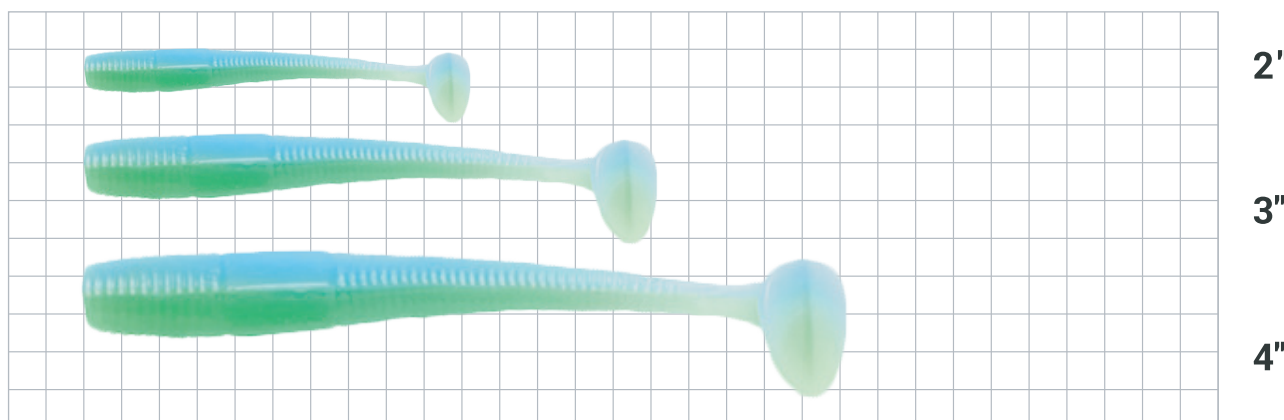

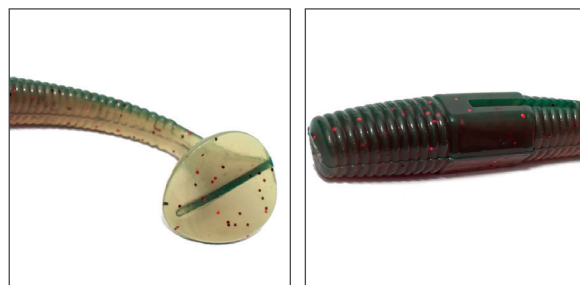

**Intech Long Heel** — one of the great examples from the collection at modern soft plastic baits scented with Crawfish flavouring. Intech Long Heel has relatively elongated «paddle tail», as well as precisely calibrated geometric characteristics and proportions of the bait's body. These features allow absolutely stable and confident using, both during the specified tension on the line or during the pauses followed by a slow sinking. The bait has a sufficiently jerky, lifelike, high-amplitude and low-frequency motions, which are intended to excite mainly the active predatory fish. Although, it also might be interesting for more «passive» fishes, due to its unique «tail» shape and medium-slow, subtly vibrations under the water. The imitation of unhurried motions and ability to mimic prey are aimed to make predator to believe that the «prey» is helpless.

The main advantage of this soft bait, is that it works perfectly with a wide range of weights. Long Heel soft bait does not stop vibration while using it with the light weights and is drifting on the predetermined depth with the heavier weight.

Long Heel soft bait comes in three different sizes:

- 2" is especially efficient for catching perch and medium — size pike;
- 3" — multipurpose model, very efficient for predator jigging fishing;
- 4" — created especially for those anglers, who are planning to catch trophy-sized zander or pike.

Intech Long Heel bait skillfully combined the best traditions and modern approach in the production of very effective live-action soft baits.

## Color Chart

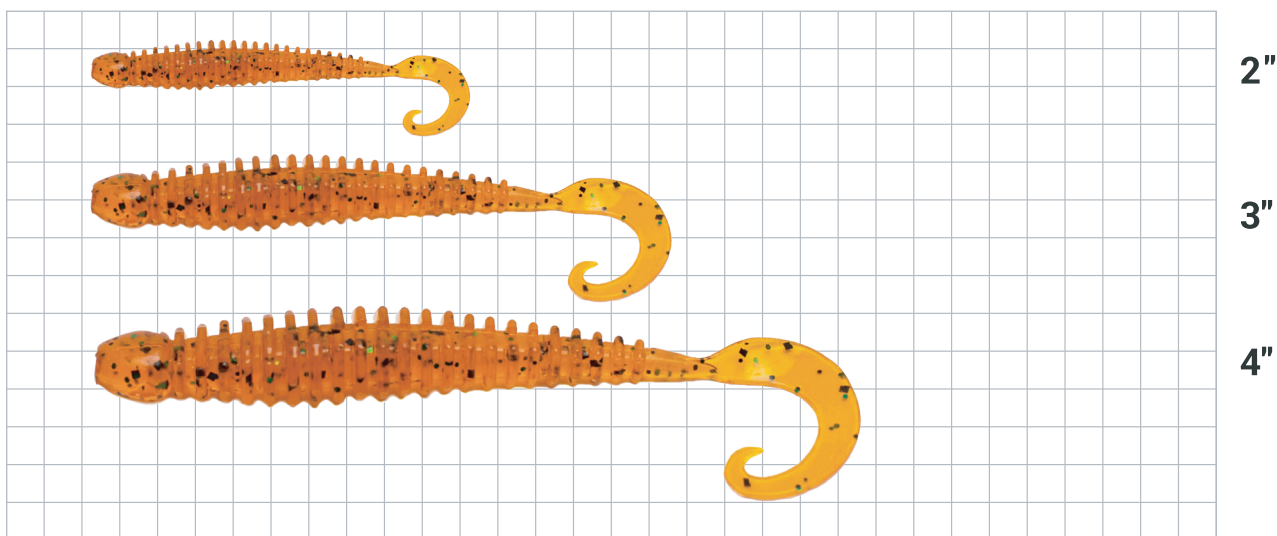

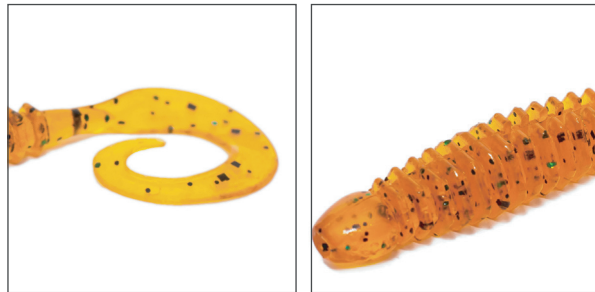

## Turborib

**Intech Turborib** is incredibly versatile and effective bait, combining the attributes of both, active and passive lures. Intech Turborib has twisted tail, and it is molded with a ribbing all along the body, what perfectly mimics a worm. The Turborib twisted-shape tail makes loud, noticeable vibrations. In addition, barely noticeable body thickening provide a special, jerky moves, especially on pauses and during free drifting. That is a prove and a testament to Turborib effectiveness.

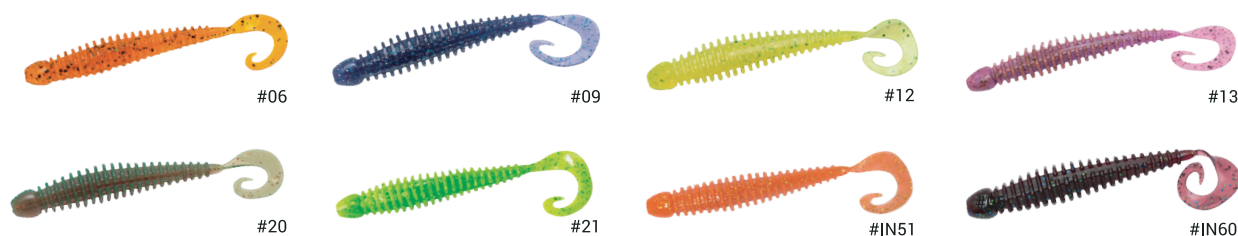

Due to its pleasing «appetizing» scent and appearance (the bait's body is impregnated with the special mix of salt and attractor with amino acids) Turborib has the great potential to entice predators, even just while laying on the bottom. Due to its actions, this lure excites the perch, which catch the prey during a long pause. Although both pike and zander prefer distinguish way of fishing, with various combinations of intensive pulls and pauses. Thanks to its simple usage, Turborib will be appreciated and will meet the expectation both, of beginners and experienced anglers. For better fixation of the hook, there is a compaction at the edge of the body. Soft, stabilizing fins, are used to generate vibro-acoustic «waves» under the water, and perfectly perform the protection function of the hook.

Intech Turborib — is a great versatile bait-combination of great quality and incredible efficiency.

## Furios PE WX4

Braided line **Intech FURIOS PE WX4** – multipurpose line, perfectly functioning with spinning tackle of any kind and any power. Product FURIOS PE WX4 has appeared on the market in 2016, thanks to the cooperation of Japanese concern YGK and fishermen-athletes from Ukraine.

This braided fishing line has established a new quality standards for a budgetary fishing line sector. Modern technologies for fiber production from high-modulus polyethylene and the best currently available four strand wire braiding method, patented by YGK under the name WX4, enabled to obtain an extremely productive line that significantly transcend already existing models of fishing lines.

Nowadays it's safe to say that Intech Furios is the thinnest, most dense and slickest fishing line in fishing line sector.

## Exseed PE X8

**Intech Exseed PE X8** – a new generation of budget X8 PE lines. This line has a slippery surface and an increased breaking load. Thanks to the latest technology of weaving – Intech Exseed PE X8 has the minimum possible stretchability. As a result, we have a cord with which you can achieve maximum casting distance and high sensitivity of all tackle.

Intech Exseed PE X8 has proven particularly good at catching in the surface layer. Such species of fish as asp, chub and seabass. Bright fluorescent coloring perfectly allows you to fish and monitor wiring at night.

## FC Shock Leader

**Intech FC Shock leader** — is made of fluorocarbon, novelty of the year 2017. This successful product was created thanks to cooperation between Ukrainian fishermen-athletes and Japanese engineers. Intech FC was developed in Japan and despite its low cost, it possess all the properties of the modern shock leaders:

- Increased stiffness;
- Abrasion resistance;
- Accuracy of the stated parameters (diameter and high break strength);
- Durability;
- Resistance to ultraviolet radiation;
- Length: available in sizes 10.25 and 50 meters;
- Extensive product range from 0.12 to 0.85 mm diameters.

## Line HIT

**new 2019**

**Intech HIT NYLON** is a high quality monofilament fishing line, made in Japan for the European market. It has a wide range of applications. An excellent choice for fishing in different conditions and by different methods. It can be used both as the main and as the leader. Distinctive features of Intech HIT NYLON are:

- high strength at knot;
- exact compliance with the declared breaking loads and diameters;
- low degree of stretching;
- convenient unwinding of 50 and 150 m;
- color - clear.

## Longaff DFV-23SB

**new 2019**

**Intech DFV-23SB** is a counterpart of the highest quality, designed for the European market together with the world leader, the Japanese company Vanfook. Along with exceptional sharpness and reliability, the characteristic feature of the counterpart is an elongated forearm and the use of thinner, but strong wire. This allows you to properly equip the soft baits up to 5" inches, eliminating loss of fish and spoiled soft bait. The hook allows for a variety of hinge attachments and catching predatory fish in different conditions and bodies of water.

## DJ-Head

Intech Head — is a **Jig Head**, made of lead with a quality hook. It is buried into the body of the bait and works perfectly when jigging. The main properties of the hook are sharpness, resilience, strength and corrosion resistance. The hook's shank shape has been designed for better soft lure holding ability. Double ring thickening with a sharp rear edge provides a maximum contact with the body of the bait. This way it is fixed much more reliably than in a other common type of jigheads.

## Ice-Invision

**Intech ICE-INVISION** – high quality monofilament line for winter fishing. Mono line is made in Japan and has appeared on the market thanks to the cooperation of Japanese concern YGK and fishermen-athletes from Ukraine.

The main characteristics of Intech ICE-INVISION are:

- High coefficient of extensibility;
- Lack of memory;
- High breaking load;
- High strength on the nodes;
- UV protection.

## Ice-Galaxy

**new 2019**

**Intech ICE GALAXY** is the latest generation of fishing line designed for winter fishing. It has a bluish tint that increases visibility on ice and high abrasion resistance. It is produced in Japan using the highest quality raw materials and the latest technology and has all the qualities inherent to modern winter fishing lines:

- visibility on ice;
- preservation of properties at temperature below freezing;
- the increased abrasion resistance;
- high strength at knot;
- wide model range from 0.095 to 0.205 mm;
- good shock absorbing jerks of large fish.
